I oppose the the northern pass for several reasons

1) Energy supply is a national security issue. Giving up our control over electricity supply to Canada means they can exert pressure on foreign and domestic policy in the US however small it maybe is mistake. I believe we have the resources to become energy independent in the US which is what we should be focusing on with our energy policy.

2) Job creation from this project will be short lived and not worth damage to the beauty of our state.

3) having a mix of electricity supply is important. The coal fired powerplants that would be shut down as a result, however inefficient have been heavily invested in by the tax payer to lower emmisions These plants already exist and provide long-term jobs for many.

Thank you

Andrew Davis
